

You don't need a "small miracle" to give birth to one.

(Even if you've had difficulty conceiving or you've ever dreamt about choosing your baby's sex.)

The Mini Ovulation Microscope (MOM) raises home fertility testing to the next level of precision. Available only in Europe until now, MOM uses high tech optics to let you "see" your exact moment of ovulation in a small drop of saliva. It's as easy to use as a toothbrush and small enough to fit in your purse.

If you know exactly when ovulation occurs (the moment a mature egg is released from the ovary and can be fertilized), you can exert a surprising degree of control over the reproductive outcome of your lovemaking. Here's how:

✓ Your baby's sex is not determined merely by some cosmic coin toss. Baby's gender largely depends on whether the egg is fertilized at the beginning or the end of the cycle. MOM allows you to plan your love life so that the odds of conceiving either a boy or a girl—your choice—are significantly improved.

✓ Most people believe that infertility is due either to some medical problem or just plain "bad luck": Not true. The problem is that menstruation and ovulation are sometimes on two very different schedules. Some women ovulate so infrequently (even though they menstruate every month), that they have only one or two brief times a year when conception is possible. Couples with this problem can succeed, if they know exactly when to try.

✓ By knowing exactly when conception is either possible or impossible, pregnancy can be avoided, if desired, without the health risks of the pill or the discomfort and inconvenience of IUDs or diaphragms.

Your gynecologist can very accurately pinpoint ovulation by performing a "Fern Test" in the office. This test is so named because certain dried body secretions look just like ferns when viewed under a powerful microscope but only during the ovulation cycle. A shapeless dot pattern appears at other times. Accurate, yes, but planning your love life around daily visits to the doctor's office is dearly absurd.

Now, thanks to the engineering excellence of Stesans, the Austrian manufacturer of precision optics, you can perform your own Fern Test in a few minutes at home. Unlike anything else available, MOM is pleasant to use because it tests

What The Experts Say

It is a known medical fact that girls are 80% more likely to be conceived on the verge of ovulation and boys 80% more likely later in the ovulation phase. MOM is perfect for gender planning because it's so precise.

- Leon Nitkin, MD (ob/gyn)

Some Women have such rare moments of ovulation that pregnancy is almost impossible. I know many women whose lives have been changed by using this wonderful instrument.

- Anait Sarkysian, MD (fertility)

I've been recommending the Mini Microscope since I read the study demonstrating an efficacy equal to the fern test we perform at the clinic. So easy to use and no health negatives, it's a gift to all women.

- Vera Grinberg, MD (ob/gyn)

Remarkable, really. A woman buys this one instrument and uses it for the rest of her reproductive life to obtain essential information about her fertility cycle. I know of nothing comparable outside a medical setting.

- Linda Beisten, CNM (ob/gyn)

If you think looking into a microscope is beyond you, think again. MOM is not your tenth grade biology microscope, although it's just as powerful. MOM is specifically designed for just one purpose to enable you to examine a drop of saliva and easily see one of two very dearly illuminated patterns. If you don't find MOM as easy to use as toothbrush, send it back for a full refund

Imagine what it will be like when you take control of your reproductive life. Order MOM today and start planning your family tomorrow.

100% SATISFACTION GUARANTEED

If not completely satisfied with your purchase, please return MOM® a for a full refund.

MOM® is available for \$155 which includes shipping.

To order, Fax your name, address, credit card number and expiration date to: 1-631-563-2110 or Mail Check (payable to MOM) or Credit Card number and expiration date to:

1401 Lakeland Avenue, Bohemia, NY 11716.

Offer made by MaybeMOM® Inc., exclusive U.S. and Canadian Distributor of the Mini Ovulation Microscope.
